

Import_Report.aspx

This page requires the option **Enable public import report** to be ticked. Please ask your service manager to activate the option for your console account.

Overview

The Import_Report.aspx frontend page will display the statistics related to the completed import processes per List.

This functionality is useful especially when the import file is remitted from a third party automated process.

A sample of the page layout as it appears when properly configured is shown below :

Import report

List News Rows per page

<u>Id</u>	<u>Msg Id</u>	<u>Send Id</u>	<u>File</u>	<u>List</u>	<u>Start</u>	<u>End</u>	<u>Rows</u>	<u>Valid</u>	<u>Duplicated</u>	<u>Valid email</u>	<u>Invalid email</u>
129	-	-	nomefile_20141203_094953_052_000100000001.txt	1	03/12/2014 09:49:54	03/12/2014 09:49:55	1	1	0	1	0
128	-	-	nomefile_20141203_094223_646_000100000001.txt	1	03/12/2014 09:42:24	03/12/2014 09:42:25	1	1	0	1	0
127	-	-	nomefile_20141203_091640_366_000100000001.txt	1	03/12/2014 09:16:41	03/12/2014 09:16:42	1	1	0	1	0
123	31	66	1_201412021729158181.csv	1	02/12/2014 17:29:31	02/12/2014 17:29:31	1	1	0	1	0
122	-	-	nomefile_20141202_121028_003_000100000001.txt	1	02/12/2014 17:29:30	02/12/2014 17:29:30	1	1	0	1	0

Id: Import Id **File:** Original File Name **List:** List Id **Start:** Start Date **End:** End Date **Rows:** Processed rows **Valid:** Valid Rows
Duplicated: Duplicated email **Valid email:** Valid Email **Invalid email:** Non valid email

When landing to this page it will be possible for the user to :

- 1) select the amount of rows the data grid will display per page (default is 5)
- 2) browse the paginated grid according to the defined value at the point 1

Report columns description

Column	Label in english	Description
Import Id	Id	The unique identifier for the specific process
Message Id	Msg Id	Message Id bound to current import process (if applicable)
Send Id	Send Id	Send Id bound to current import process (if applicable)
Imported File Name	File	The name of the submitted import file
List Id	List	The target list the process imported the recipients for
Start date	Start	The datetime the import process has begun

End date	End	The datetime the import process has ended
Processed rows	Rows	The overall count of rows the process has treated
Valid rows	Valid	The amount of valid rows the process was able to read
Duplicated email messages	Duplicated	The email recipients found as duplicated
Valid email messages	Valid Email	The amount of unique email addresses imported
Non valid email messages	Invalid Email	The amount of invalid email addresses the process couldn't import to the desired list

Normally when sending campaigns out from Mailup account, there's no relationship between an import process and the subsequent dispatch it may take place.

Fields **Message Id** and **Send Id**, will be valued only when using MailUpSend.SendMessageNL to import and send out messages in one single process.

For more information about MailUpSend.SendMessageNL web method, please read [here](#)

Accepted Arguments

Field name	type	description
IdList	int	the unique identity for the list the report will display data for
ListGuid	string	the unique string identifier for the list being taken into consideration by the report

Callback pattern

The frontend page is placed for every console, regardless of the service activation status, in the frontend root as follows :

`http://<your_console_host>/frontend/Import_Report.aspx`

when accessed with the proper query string arguments, it will look like

`http://<your_console_host>/frontend/Import_Report.aspx?ListGuid=<your_list_guid>&ListId=<your_list_id>`

The ListGuid information can be easily retrieved from the Mailup console interface : Click on Settings from your left panel menu --> Account settings --> Developer's corner --> Codes table. There, it will be listed all the GuidList information for each List

It can be either retrieved via REST or SOAP API, for more information please take a look at these sections : [REST](#) or [SOAP](#)

Working sample

http://e9x3d.s85.it/frontend/Import_Report.aspx?ListGUID=52dd6acf-785e-4690-9899-a3a42066d052&IdList=1

Troubleshooting

Below a simple chart displaying the possible issues occurring when trying to run this page, along with a suggested resolution for the specific issue

Error Message	Possible causes	Resolution
---------------	-----------------	------------

One or more arguments were not passed in	one of the two expected arguments was not passed or passed with the wrong lettering	Check the lettering of the two parameters the page actually expects as mandatory (correct naming is displayed in the Accepted Arguments section above)
Guid and ListId mismatch	The inbound parameters were passed to the page with the correct lettering, however the ListGuid and the List Id values do not match.	Please check the ListGuid value actually relates to the ListId you've requested the page for
An expected error occurred whilst validating arguments	The arguments were passed with the right naming, but one of them may have been passed as an empty value	Please check your query string callback includes all the mandatory parameters as the page expects
